UCC GUIDE

UCC / Coordination Centre Functions

Companion to the ICMS 3.0 – Team Guide, for RDC, UCC and Coordination Centre staff

IMWG-MANUAL-2026-02 · Draft v0.1

Prepared by the INSARAG Information Management Working Group (IMWG)

DOCUMENT CONTROL

Title	ICMS 3.0 – UCC Guide
Subtitle	UCC / Coordination Centre Functions
Document reference	IMWG-MANUAL-2026-02 (Draft v0.1)
Owner	INSARAG Information Management Working Group (IMWG)
Series	This guide is a companion to the ICMS 3.0 – Team Guide (IMWG-MANUAL-2026-01A). It covers the UCC Module only — team-level applications, field data collection and the Team Module are covered in the Team Guide.
Audience	UCC Staff, RDC, Sector Coordinators and other Coordination Centre personnel
Environment	Prepared against the ICMS 3.0 Training Environment
Last reviewed	September 2026
Enquiries	insarag.imwg@gmail.com

Record of amendments

Date	Version	Description
09/2026	v0.1	Initial issue — built as a companion to the ICMS 3.0 Team Guide, from the UCC Module section of the ICMS 3.0 Step-Over training deck and supporting UCC Module reference material.

STATUS

This is a working draft (v0.1) prepared for IMWG review ahead of formal release into the training environment. It should be read alongside the ICMS 3.0 – Team Guide, which covers the applications, field data collection and Team Module content that this guide does not repeat.

CONTENTS

1. Introduction.....	4

1. INTRODUCTION

When to use	Use this guide to manage and perform UCC / Coordination Centre functions during USAR operations using ICMS 3.0.
Role	UCC Staff / RDC / Sector Coordinators / Coordination Centre personnel
Covers	The UCC Module — the seven-tab dashboard used by the Coordination Centre to maintain situational awareness across all teams, sectors and worksites.
Does not cover	Team-based field functions — Quick Capture, Field Maps, worksite triage and victim extrication procedures, and the Team Module — which are addressed in the companion ICMS 3.0 – Team Guide.

1.1 About This Guide

ICMS is a multi-tiered system in which different groups and functions work together across the system to produce an information management capability that enhances situational awareness and, as a result, improves coordination and outcomes for affected communities.

This guide is the companion to the **ICMS 3.0 – Team Guide**, and focuses solely on the UCC Module — the Coordination Centre's own dashboard. Where the Team Guide walks a USAR Team Leader or Field Staff member through creating and updating a worksite in the field, this guide picks up that same information at the Coordination Centre: how the UCC sees it, prioritises it, assigns it to a team, and reports on it.

As with the Team Guide, ICMS has two separate login systems. All UCC-based functions described in this guide use the “**UCC**” login, separate from the Team logins used for field applications.

1.2 The ICMS 3.0 Field-to-Command Workflow

The UCC sits at the centre of the same field-to-command cycle introduced in the Team Guide:

Capture once. Share quickly. Prioritise effectively. Task with confidence.

Of the four phases in that cycle, the UCC Module is built specifically around Phase 3 and Phase 4:

Phase 3 – The Brain (UCC Visibility)

Field data captured by teams instantly aggregates at the UCC, giving what the training material calls a ‘God’s Eye’ view: comprehensive situational awareness across all operational sectors (visibility), evaluation of competing worksites using triage data (comparison), and macro-scale understanding of rescue opportunities to prevent resource bottlenecks (coordination). This is the OVERVIEW, MAP and SECTORS information described in Section 2 of this guide.

Phase 4 – The Muscle (Tasking the Command Point)

Tasking flows back out from the UCC through a hub-and-spoke structure: UCC → Team Command Point (CP) → Squads. The UCC’s role is to assign a worksite to a team with a complete picture attached — why it was prioritised, what hazards and victims are known, and which team is best placed to respond. Squad-level tasking beneath the Team CP is then completed in the Team Module, covered in the Team Guide.

READ TOGETHER

This guide assumes the reader is already familiar with the four-phase workflow, the worksite triage categories (A–D) and the injury/victim categories described in Sections 1.4 and 3 of the ICMS 3.0 – Team Guide. They are not repeated here in full.

1.3 Access to ICMS Functions

Access to ICMS functions, for both Team and UCC, is through the INSARAG HUB: insarag.hub.arcgis.com.

The HUB is a common landing page with a hard-wired link from the Virtual OSOCC (VO): this link sits in the ICMS sub-section of the UCC section on the VO and may be emailed to responding teams and coordination staff along with logins and passwords. Each event has its own login, password, forms and dashboards, and

access is only available for events and applications the user has been authorised for. The HUB is managed by IMWG, who create the event and its associated ICMS functions and dashboards whenever a USAR response is taking place or is very likely to occur.

From the HUB's ICMS Web/Tablet Access section, the UCC Module is opened with its own dedicated button, alongside the Team Module button used by responding teams (see Figure 1.1).

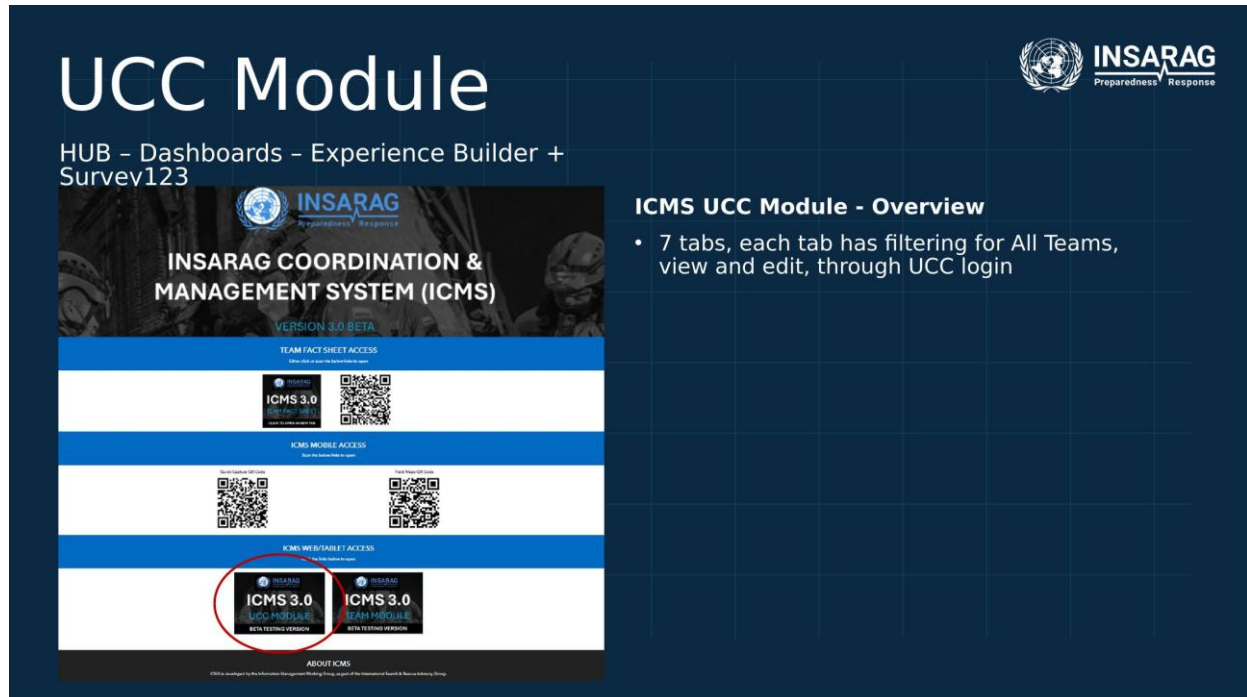

Figure 1.1. The UCC Module entry point on the HUB (circled in red), alongside the Team Module button.

Any questions or queries can be sent to IMWG at insarag.imwg@gmail.com.

2. THE UCC MODULE

The UCC Module is built from the HUB, Dashboards, Experience Builder and Survey123 — the same product stack behind the Team Module. It is a seven-tab dashboard — Overview, Map, Sectors, Tasking, Team/RDC, View/Export Data and Photo Viewer — and every tab filters across all teams, with view and edit access, through the UCC login.

2.1 OVERVIEW Tab

The OVERVIEW tab is a general overview of the Area of Operations (AO) for the whole event:

- Static page — no editing.
- Provides a summary of all teams and their status.
- Provides a view of worksites and coordination layers.
- Provides simple details around key metrics (rescued alive, deceased, etc.).
- Useful for high-level briefings — to LEMA, politicians and other external stakeholders.

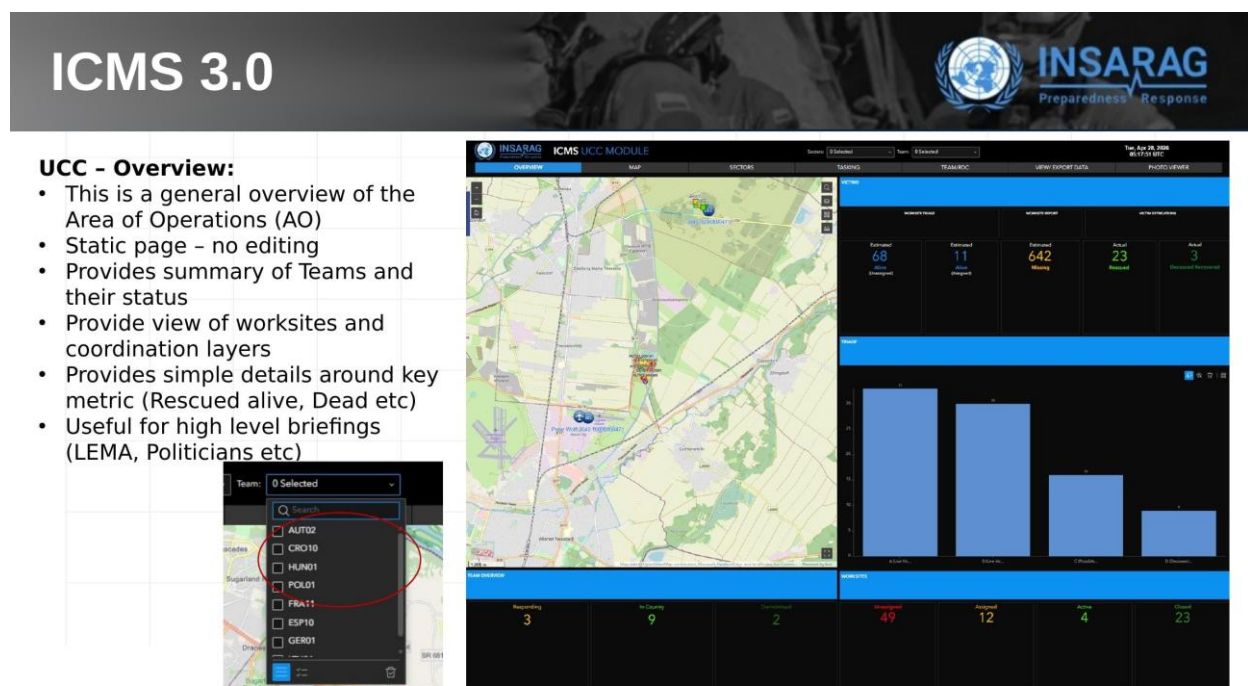

Figure 2.1. The UCC OVERVIEW tab, showing the Victims, Triage, Team Overview and Worksites summary panels across every team on the event. The Team filter (circled in red) supports multi-select, unlike the Team Module's single-team filter.

ALL TEAMS, NOT ONE

Unlike the Team Module's Overview (which is scoped to a single logged-in team), the UCC's Team filter is a multi-select list — every team on the event, individually selectable — reflecting the UCC's event-wide view.

2.2 OVERVIEW Map — 3D Building Feature

The map in the UCC's OVERVIEW tab includes the same 3-dimensional building feature described in the Team Guide: any layer where building data has been updated presents as a 3D image, which can be useful in countries where building data is regularly updated, giving an indication of potential building heights ahead of a sudden-onset disaster.

1. Click the map-mode thumbnail in the bottom-left corner to change to 3D view.
2. Anywhere on the screen, right-click and hold, then move the mouse toward the top of the screen; this tilts the image until flat, or stop at the desired viewing angle.
3. Return to the traditional overhead view by clicking back on the world-map thumbnail in the bottom-left corner.

ICMS Team and UCC Module - OVERVIEW map 3D feature

ICMS UCC Module - OVERVIEW map

This map in the OVERVIEW tab includes a feature that presents any layers where building data is updated as 3-dimensional images.

This may be useful in countries where building data is regularly updated within layer updates and can give an indication of potential building heights prior to a sudden on-set disaster.

- To change to this view, click the map image in the bottom left corner
- Then anywhere on the screen, right click and hold down, then move mouse the mouse towards the top of the screen, this tilts the image until flat, or stop at the desired viewing angle.

- Return the screen to traditional overhead view by clicking back on world map image in the bottom

Figure 2.2. The OVERVIEW map 3D feature, shared by the Team and UCC Modules. A red arrow links the bottom-left thumbnail to the toggle action; the mouse icon graphic illustrates right-click-and-hold to tilt the view.

2.3 MAP Tab

The MAP tab is similar to the ICMS 2.0 UCC app, but with significant workflow upgrades. This is where the UCC's coordination layers — event, sector and Points of Interest (POI) — are entered and edited.

For example, to add a Point of Interest:

1. Click on the POI type in the left-hand layer list.
2. Drag it to the required location on the map.
3. Name it (add a label).
4. Create.

A full legend of every coordination and Points-of-Interest layer — including the same Worksite and Victim Extrication category colours used throughout ICMS 3.0 — is available on the right-hand side of the map.

ICMS 3.0

ICMS UCC Module - MAP

This is similar to the ICMS 2.0 UCC app, but with some significant workflow upgrades.

1. Coordination layers; event, sector, POI can be entered and edited on this page
2. Example – for POI's
 - a) Click on POI
 - b) Drag to location required
 - c) Name (label)
 - d) Create
3. Layers legend on right side

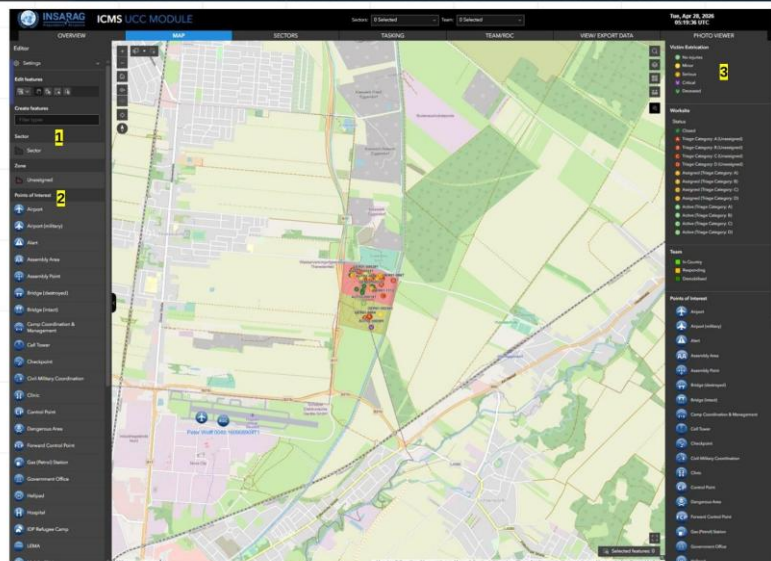

Figure 2.3. The UCC MAP tab: coordination layers and POI list (1), the POI type list (2), and the layers legend (3), numbered on the training slide.

2.4 SECTORS Tab

The SECTORS tab provides information about sectors and allows teams to be assigned to them. This matters beyond the map itself: sector assignment impacts other functions, including the filtering used for team-based functions in the Team Module.

To assign a team to a sector:

1. Select the sector to assign (a fire station, in the training example).
2. Click the assign icon.
3. Select the team(s) to assign.
4. Submit.
5. The team is now assigned to that sector.

ICMS 3.0

INSARAG
 Preparedness Response

ICMS UCC Module - SECTORS:

- This page provides information about sectors and allows Teams to be assigned to sectors
- This is important as it impacts on other functions such as filtering on your team for team base functions in the teams app.

Sector assignment:

- Select a sector to assign (fire station in this example)
- Click on 
- Select team(s) to assign
- Submit
- Team assigned to sector

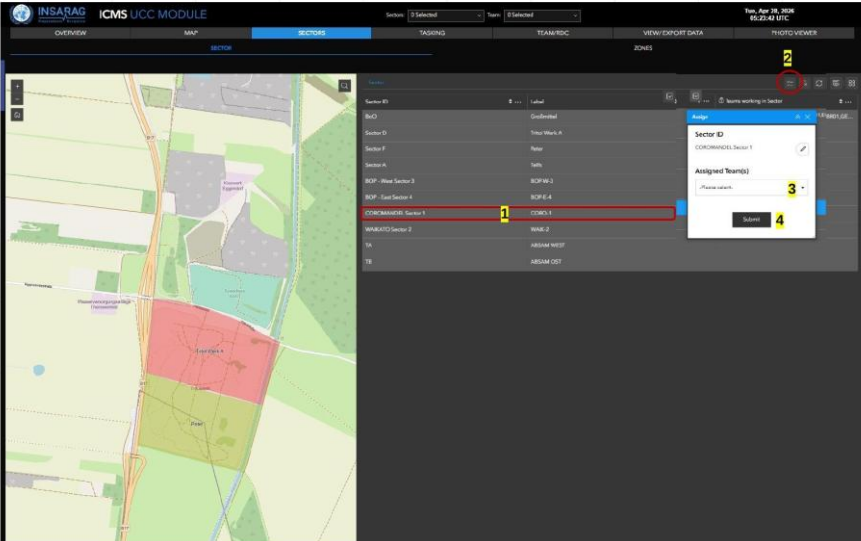

Figure 2.4. The UCC SECTORS tab: the sector list (1), assign icon (2), team-selection dropdown (3) and Submit button (4), with the selected sector row outlined in red.

WHY SECTOR ASSIGNMENT MATTERS

See Section 5.2 of the Team Guide for the related worksite-numbering methodology: worksite IDs no longer depend on the sector they sit in, precisely because sector boundaries can and do change during an operation. Sector assignment on this tab still matters, though — it drives team-based filtering elsewhere in ICMS 3.0, so it should be kept current as sectors are stood up, merged or retired.

2.5 TASKING Tab

The TASKING tab is where the UCC assigns a worksite to a team. Worksite filtering options are available, and, as elsewhere in ICMS 3.0, meta-rich data fields in each worksite are combined with a category label and a traffic-light status system for easy recognition of priority worksites.

To task a team to a worksite:

- Filter to Unassigned.
- Select the worksite to be assigned.
- Click the assign icon.
- This opens an embedded form:
 - a) Auto-populates the worksite ID.
 - b) Recalculate the address.
 - c) Assign a team (only teams attached to the event will show).
 - d) Set the ASR (assessment/search & rescue) level.
 - e) Set as assigned.
 - f) Complete as required.
 - g) Submit.

ICMS 3.0

ICMS UCC Module – TASKING:

- Worksite filtering options
- Meta rich data fields in each Worksite, combined with a 'Category' label traffic light system allows for easy recognition of priority Worksites
- UCC tasking a TEAM to a worksite, steps:
 1. Filter to unassigned
 2. Select worksite to be assigned
 3. Click on 
 4. Opens embedded form:
 - a) Auto populate worksite ID
 - b) Recalculate address
 - c) Assign team (only teams attached to event will show)
 - d) Set ASR
 - e) Set as assigned
 - f) Complete as required
 - g) Submit
- **Note:** Team status is shown here
 - Green - full capable
 - Yellow - 50% capable (Heavy teams only)
 - Red - Fully committed
 - Shows worksites assigned to teams
 - Worksites must be assigned here to be available for squad level tasking – in the Teams Module

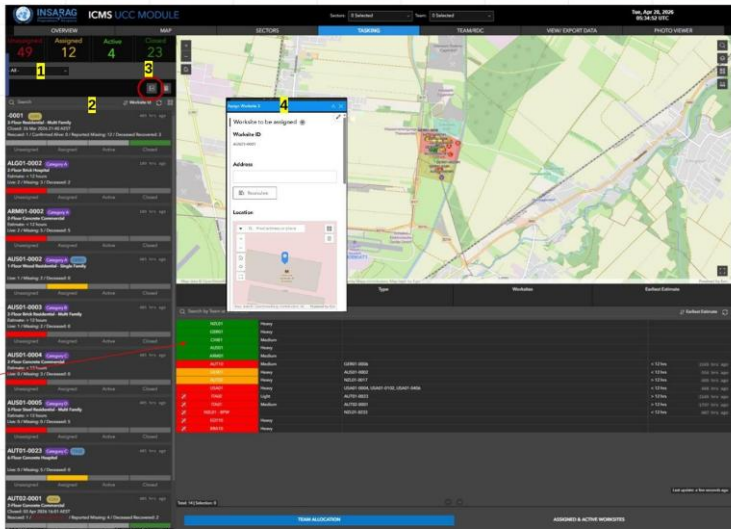

Figure 2.5. The UCC TASKING tab: filter options (1), worksite selection (2), the assign icon (3) and the embedded assignment form (4), with a red arrow linking the worksite list to the Team Allocation table below.

TEAM STATUS AND WHAT HAPPENS NEXT

Team status is shown alongside each team in the allocation table:

- Green — full capability.
- Yellow — 50% capable (Heavy teams only).
- Red — fully committed.

A worksite must be assigned to a team on this tab before it becomes available for squad-level tasking in the Team Module — see the Team Guide for that next step.

2.6 TEAM/RDC Tab

The TEAM/RDC tab is the UCC's team management page. It shows the status of every team — Responding, In-Country or Demobilised — along with the team information reported for each.

Team data comes either from the Team Fact Sheet form submitted through Quick Capture (see the Team Guide, Section 2.2), or from information entered directly on this page. To update a team's details from the UCC:

- Select the team.
- Click on the desired option (View, New or Edit).
- The embedded form opens for editing.

ICMS 3.0

ICMS UCC Module - TEAM/RDC

Team management page

- Shows status of teams
 - Responding
 - In-country
 - Demob
- Team information displayed
- Data comes from QC – Team Fact sheet form, or from info entered in this page.
- Ability to update teams (Fact Sheet) from this page
 - Select team
 - Click on desire option
 - Embedded form open

View New Edit

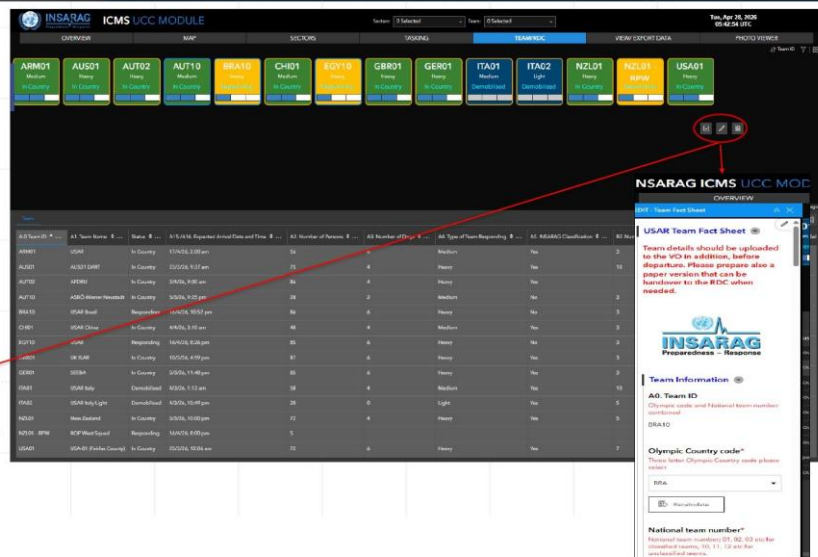

Figure 2.6. The UCC TEAM/RDC tab: the team status cards, the team data table, and the View / New / Edit icon row, linked by a red arrow to the embedded Team Fact Sheet edit form.

2.7 VIEW/EXPORT DATA Tab

The VIEW/EXPORT DATA tab is the UCC's reporting suite. It allows data to be accessed and exported from three datasets: Team Fact Sheets, Worksites (Triage, Report and Assignment data) and Victims.

To generate a report, select the relevant tab at the top of the page, then select a template. The same process applies across all three tabs:

- Team Fact Sheets** — export the Team Fact Sheet template.
- Worksites** — Triage template, Worksite Report template, or Assignment Briefing Package.
- Victims** — export victim extrication data.

ICMS 3.0

ICMS UCC Module - VIEW/EXPORT DATA

View/Export Data page

- Access and export data from:
 - Team Fact Sheets
 - Worksites
 - Victims

To access, select tab at top, and then select template. Do the same for the other 2 tabs to access:

- Team Fact Sheets
- Worksites:
 - Triage and Worksite templates
 - Assignment Briefing Package
- Victims

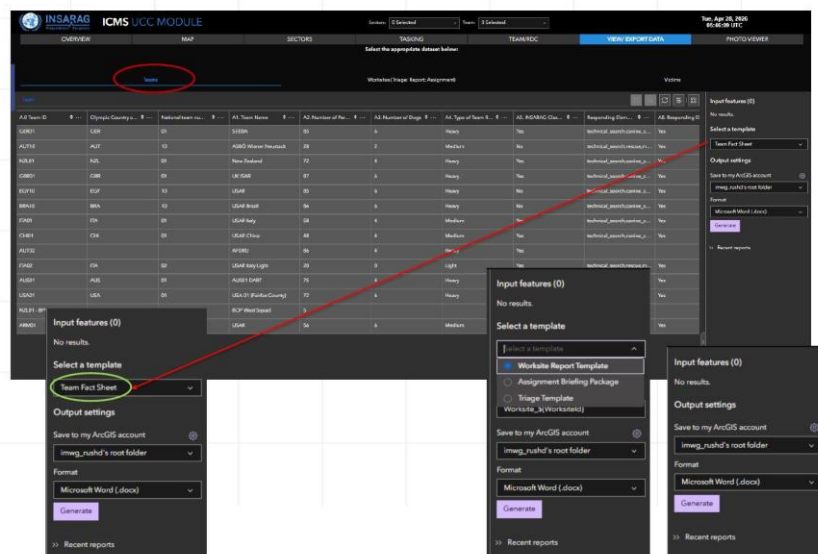

Figure 2.7. The UCC VIEW/EXPORT DATA tab: the Teams sub-tab selected (circled in red) and the template picker (circled in green), with a red arrow to the 'Select a template' panel showing the available Worksite templates.

OUTPUT FORMAT

Reports generate as Microsoft Word (.docx) files, saved to the requesting user's own ArcGIS account folder, with recent reports listed for quick re-access.

2.8 PHOTO VIEWER Tab

The PHOTO VIEWER tab gives the UCC a consolidated view of imagery collected across the event. Filter, layer and legend tools are available to narrow the view, and the layers list — Layers, Worksite, Victim Extrication, Tracks, Event — controls which collected imagery is shown.

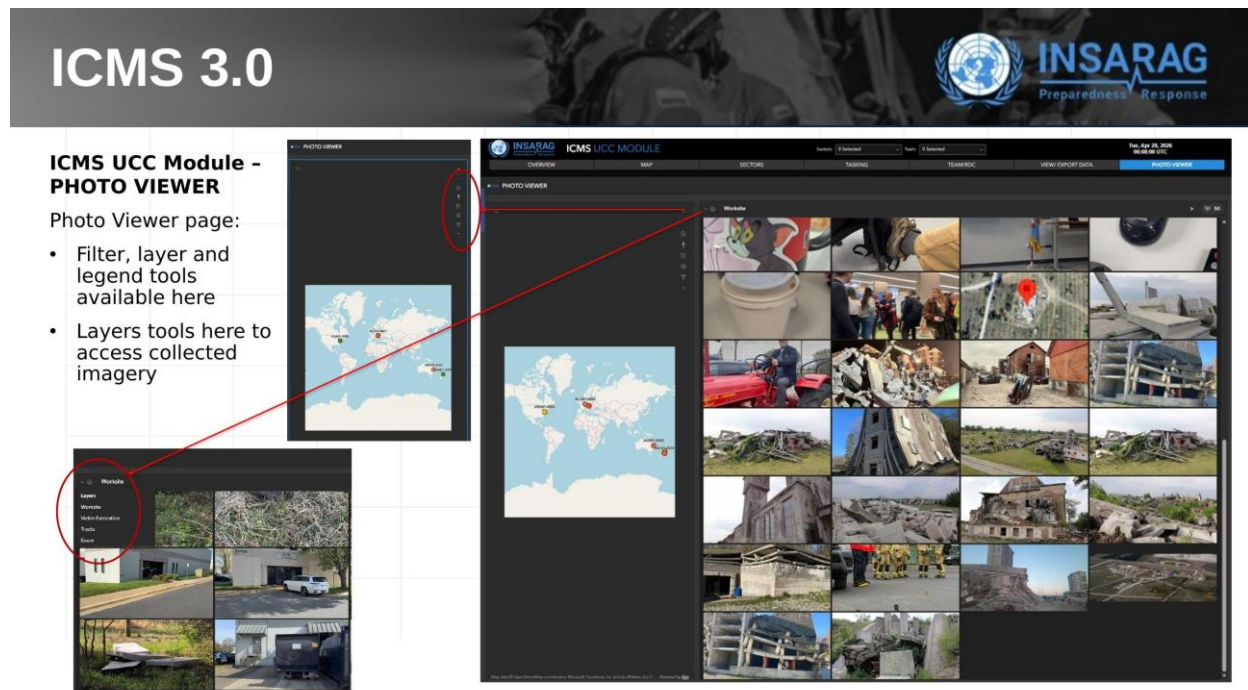

Figure 2.8. The UCC PHOTO VIEWER tab: the filter/layer/legend tool icons and the layers list (both circled in red), linked to the resulting photo grid for a selected worksite.

3. REFERENCES

This guide covers the UCC Module only. The equivalent Team-level functions are documented separately:

Title	Description
